The Ministry of Agriculture through the Guyana Marketing Corporation continues to provide services for the non-traditional agriculture sector. As such, the Guyana Marketing Corporation has introduced its “Refrigerated Trucking Service.”

The service is equipped with six (6) Refrigerated Trucks, which includes;

- ✓ (3) two tonne
- ✓ (1) four tonne
- ✓ (2) six tonne

The Refrigerated Trucking Service was established to provide farmers and exporters with the required transport for their produce from one location to another.

When produce is harvested from the *parent plant* it rapidly undergoes “*biochemical changes*” that will speed up the ripening rate and reduce its shelf-life. It is important to keep the produce *cool* as this maintains the quality, especially during transportation. One of the recommended ways to maintain the quality is the use of *Refrigerated Trucks*, which helps in:

- ✓ Reduction of water loss
- ✓ Reducing wilting and ripening of produce
- ✓ Reducing the growth of Micro Organisms
- ✓ Protects your Produce for Rain, Sun and Dust

Benefits of Using Refrigerated Trucks

- ✓ Extended Shelf-Life of Produce
- ✓ Quality produce available for the Market
- ✓ Sustained Markets
- ✓ Better Prices for produce
